

# Division Strategies

$$18 \div 6 = \square$$

## Draw a Picture

$$18 \div 6 = 3$$

There are 18 in all:

I put 6 into each group,

and I have 3 equal groups.

## Repeated Subtraction

$$\begin{array}{r} 18 \\ - 6 \quad 1 \\ \hline \end{array}$$

12

$$\begin{array}{r} - 6 \quad 2 \\ \hline \end{array}$$

6

$$\begin{array}{r} - 6 \quad 3 \\ \hline \end{array}$$

0

I subtracted  
6 three times.

$$18 \div 6 = 3$$

## Skip Count

6, 12, 18

This is 3 sixes,

so the answer is 3.

$$18 \div 6 = 3$$

## Use what you know:

Multiplication Facts and Fact Families

I know that  $3 \times 6 = 18$ , so

$$18 \div 6 = 3$$
