

PLACE VALUE MATCH-UP

BY SANDY REED

<http://thetieddyedteacher.blogspot.com>

Directions:

- Shuffle both sets of cards so they are mixed thoroughly.
- Place both sets face down on a flat surface so you can see each card.
- The first player draws two cards and reads the number and/or number words out loud. If they are a match, the player gets to keep the pair of cards. If they do not match, they are turned back over and it is the next player's turn.
- This continues until all of the pairs have been found.
- The winner is the player with the most cards.

four thousand, six hundred ninety-two	nine thousand, eight hundred twenty-one
six thousand, one hundred eighty-five	twelve thousand, four hundred fifty-six
three thousand, two hundred five	twenty-six thousand, nine hundred two
seventy thousand, six hundred thirty-eight	four thousand, eight hundred seventy-six
eight thousand, three	eleven thousand, one hundred eighty-seven
forty-two thousand, five hundred sixty-seven	fifty-eight thousand, thirty-two

More place value practice ideas:

- Using the cards with number words, have students read the words out loud and then write the number that goes with the words on the card.
- Using the number cards, have students write the numbers out in words.
- Using the number cards, have students write the numbers in expanded notation.
- Using the number cards, have students tell you the value of each digit in the number. (Example: 12,492 - the value of the 4 is 400).
- Using the number cards, have students put the numbers in order from least to greatest and then greatest to least.
- Using the number cards, have students create addition and subtraction problems and then solve to find the answers.
